Re Item V

Reasoned statement under Article 35(2) with regard to novelty, inventive step or industrial applicability; citations and explanations supporting such statement

The invention starts from the document US-A-5 005 501.

The aim of the invention is to provide a compact and lightweight multi-needle sewing machine capable of embroidery without being limited by the distance between the rails parallel to the arm.

This aim is achieved in that a second rail connected to first carriages adapted to slide on first rails is perpendicular to the first rails, the distance between the first rails being shorter than or equal to the length of the second rail, an embroidery frame unit is mounted on the second carriage, the first carriages being located on one side of the second rail and the embroidery frame unit being located on the other side of the second rail, or the second rail being separable alone or in combination with said second carriage and/or said embroidery frame unit. No document of the state of the art (only A-documents) presents these features.
